                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     parasite Plasmodium yoshii "",
Nature 419:512-519 (2002).
-!- CATALYTIC ACTIVITY: ATP + ubiquitin + protein lysine = AMP +
diphosphate + protein N-ubiquityllysine.
-!- PATHWAY: Ubiquitin conjugation; second step.
-!- SIMILMATTY: Belongs to the ubiquitin-conjugating enzyme family.
-!- SIMILMATTY: Belongs to the ubiquitin-conjugating enzyme family.
-!- CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Preliminary data.

--- CATALYICA ACTIVITY: ATP + ubiquitin + protein lysine = AMP + diphosphate + protein N-ubiquityllysine.
--- PATHWAY: Ubiquitin conjugation; second step.
--- SIMILARITY: Belongs to the ubiquitin-conjugating enzyme family. EMBL; ABC19444; AAN36127.1; -; Genomic_DNA.
                                                    preliminary data.

"A comprehensive survey of the Plasmodium life cycle by genomic,
T. Transcriptomic, and proteomic analyses.",
Science 307:82-86(2005).
-I-CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
prellminary data.
-I-CATALYITC ACTIVITY: ATP + ubiquitin + protein lysine = AMP +
diphosphate + protein N-ubiquitin-conjugating enzyme family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DIRALINE_2297040; PubMed=14621292; MEDLINE_2297040; PubMed=14621292; Makamura Y., Kaneko T., Sato S., Mimuro M., Miyashita H., Tsuchiya T., Sasamoto S., Watanabe A., Kawashima K., Kishida Y., Kiyokawa C., Kohara M., Matsumoto M., Matsumo A., Nakazaki N., Shimpo S., Takeuchi C., Yamada M., Tabata S.; Tomplete genome structure of Gloeobacter violaceus PCC 7421, a cyanobacterium that lacks thylakoids."; DNA Res. 10:137-145(2003).

-! CATALYTIC ACTIVITY: L-Glutamate 1-semialdehyde + NADP(+) + FRNA (Glu) = L-Glutamy1-tRNA (Glu) + NADPH.
-!- PATHWAY: Porphyrin biosynthesis by the C5 pathway; first step. Involved in chlorophyll biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                        29-MAR-2004 (Rel. 43, Created)

Empirical analysis of transcriptional activity in the Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -1- SUBJUNT: Acts as homodimer to bind the primary ethylene response element (By similarity).
-1- SUBCELLULAR LOCATION: Nuclear (By similarity).
-1- MISCELLANBOUS: LOSS-Of-function mutations (ELLI-1 and ELLI-2) in the gene show a weak ethylene-insensitive phenotype.
-1- SIMILARITY: Belongs to the EIN3 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pfan, PP04873; BIN3; 1.

3B9 was positive. CDNA clones of the 3B9 light and heavy chains were cloned into pGEMYf+ and transformed into E. coli DH5-alpha. A heavy chain cDNA clone was sequenced (AAQ83491) that encoded the protein given in AAR70190. 3 CDNB (AAR70198-200) were identified. (Updated on 25-MAR-2003 to correct PN field.)

Sequence 7 AA;

## ALIGNMENTS

```
Chimeric and humanised IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of IL-4-mediated and IgE-mediated allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                              Chimeric antibody; humanized antibody; antibody engineering; monoclonal antibody; MAD; interleukin-4; IL-4; allergy; CDR; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gross MS, Sylvester DR;

                                                                                                                                                                                                                                                                                                                  Heavy chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanísed antibody; IL-4 mediated allergic reaction; Immunoglobulin B-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a complementarity determining region (CDR) of the heavy chain variable region of murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunosjobulin B-mediated allergic reactions e.g. allergic reninitis, conjunctivitis, atopic dermatitis, atopic acthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a heavy chain complementarity determining region (CDR) from an antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                         Antibody; interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease; complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                         The present sequence is that of complementarity determining region (CDR) antibodies of the heavy chain of murine monoclonal antibody 10D5. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliocate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Albheimer's disease or (pre-)clinical cerebral amyloid angiopathy, and to inhibit

The invention relates to at least one isolated mammalian amyloid antibody comprising at least one heavy comprising at least one isolated mammalian amyloid antibody that binds to the same region of an amyloid polypeptide as an antibody comprising at least cone heavy chain complementarity determining at least cone heavy chain caid sequence of at least one of SEO ID NO: 79.78, (ii) having the amino acid sequence of at least one of SEO ID NO: 79.78, (iii) having the amino acids 2-7, 3-8, 33-42, or 34-40 of a fully defined sequence of 42 amino acids (SEO ID NO: 50), (iii) an isolated nucleic acid encoding at least one of may of the isolated mammalian amyloid antibody. (iii) an isolated nucleic acid encoding at least one of sEO ID NO: 50, (iii) an isolated nucleic acid encoding at least one muman complex of sequence of SEO ID NO: 51, 52, 61, 62, 71, 72, 81 and 82, (iv) an isolated nucleic acid encoding an amyloid antibody, (vi) a protatypolic or entatypoid antibodis. (vi) a method of an isolated nucleic acid encoding an amyloid antibody (vi) a method of comprising an isolated nucleic acid encoding an amyloid antibody (vi) a method of comprising an isolated nucleic acid encoding an amyloid antibody (vi) a method of the amyloid antibodise mentioned, and at least one pharmaceutical carrier or animal, (vi) a method of diagnosing or treating an amyloid antibodise mentioned, where the device comprising a contracting or administering a comprising at least one amyloid antibodise mentioned, where the device comprising at least one amyloid antibodise mentioned, where the device comprising a contracting or administering as anyloid antibodise mentioned, where the device comprising a contracting or administering as anyloid antibodise mentioned, where the device comprising a contracting or administering as anyloid antibodise mentioned, where the device c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     migraine, dementia and infections. This sequence represents a heavy chain CDR useful in the antibody of the invention.
                                                                                                                amyloid-associated disorders, such as Alzheimer's disease, cancer, allergies, autoimmune disease, Parkinson's disease, multiple sclerosis, migraine and dementia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune disease, Parkinson's disease, AIDS, multiple sclerosis, migraine, dementia and infantia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                       The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans. The present sequence represents the heavy chain variable region of Ig NEW, and is used in the course of the
                                                                                                                                                                                                                                                                                                                                                                              New DNA molecules encoding recombinant antibodies useful for treating IL4 -mediated conditions.

This sequence represents the heavy chain of the humanised 1B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic asthma and anaphylactic shock. The antibodies are also useful for requiating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mouse; 1F7; antibody; immune modulator; anti-HIV antibody; CDR; complementarity determining region; framework-determining region; FR; heavy chain; light chain; HIV infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a hepatitis C virus (HCV) vaccine comprising different groups of peptides each group being capable of raising, in an infected individual, an antibody able to bind to the hypervariable 1 (HVR1) region of the envelope protein E2 of the infecting HCV strain. The different groups of peptides are administered sequentially to raise antibodies, helper T-lymphocytes, and cytotoxic T-lymphocytes which are cross-reactive to the HVR1 region of the infecting HCV. The vaccines are useful for preventing and treating chronic HCV
                                                                                                                                      The present invention relates to coding sequences of the murine 1F7 antidictypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primate antihuman immunodeficiency virus (RIV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 heavy chain
                                                New polynucleotide encoding a complementarity- or framework-determining region of an anti-idiotypic antibody that binds to human or primate anti-human immunodeficiency virus (HIV) antibodies, for use in vaccines
                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        helper

The present invention describes an isolated antibody that binds specifically to a stalk of CD30 of a cell, or to an epitope destroyed upon cleavage of soluble CD30 (sCD30) from intect CD30. Also described:

(1) a composition comprising the acid encoding an antibody that binds therapeutic part; (2) a nucleic acid encoding an antibody that binds comprising the nucleic acid encoding an antibody that binds specifically to a stalk of CD30 of a cell, or to an epitope destroyed upon cleavage of SCD30 from intact CD30; (3) an expression vector comprising the nucleic acid operably linked to a promoter; (4) inhibiting growth of a CD30+ cancer cell; (5) detecting the presence of a CD30+ cell as sample; (6) a host cell expressing the isolated nucleic acid encoding the antibody having variable heavy and variable light can a biological sample comprising a container and an anti-CD30 antibody.

An anti-CD30 antibody has cytostatic activity, and can be used in gene therapy. The anti-CD30 antibody that binds specifically to a stalk of contact CD30 is useful for the manufacture of a medicament for inhibiting the exemplification of the present invention.
                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                         New antibody that binds specifically to a stalk of CD30 of a cell, or t
an epitope destroyed upon cleavage of soluble CD30 (sCD30) from intact
CD30, useful for inhibiting the growth of a CD30+ cancer cell.

This invention relates to novel antibodies that bind to the G protein coupled receptor protein identified as GRR64, namely GRR64-1, GRR64-16, GRR64-18, GRR64-18, GRR64-19, GRR64-19, GRR64-19, GRR64-18, GRR64-18, GRR64-18, GRR64 anti-GRR64 antibodies as selective cytotoxic agents against GRR64 expressing tumour cells such as those associated with ovarian cancer, uterine cancer and Ewing's sarcoma. The present invention describes epitope mapping of those antibodies that show high affinity binding to GRR64 through competitive binding analyses, such that the antibodies can be assessed for GRR64 dependent cell death in vitro. Accordingly, they can be used to develop cytostatic compositions for gene therapy or immunotherapy that inhibit cellular proliferation of an ovarian cancerous call and furthermore can diagnose and inhibit growth of tumour cells. This polypeptide is encoded by a heavy chain variable region DNA sequence of a murine anti-human GRR64 antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                    New antibody that inhibits binding of a GPR64 polypeptide to an antibody comprising GPR64-18, GPR64-81, GPR64-93 or GPR64-101, useful in preparing a composition for diagnosing or treating ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mouse; human; humanised antibody; antibody; Alzheimer's disease;
Down's syndrome; cerebral amyloid angiopathy; neuroprotective; nootropic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an engineered CD44 antibody for inducing the differentiation and wither of leukemia cells, the gene in the heavy chain and light chain variable region of monclonal antibody H144a of CD44, the polypeptide coded by said gene, the carrier containing said gene, and the application of said gene and polypeptide in preparing medicines for diagnosing and treating leukemia and disclosed. The present sequence represents the amino acid sequence of the mouse CD44 antibody V segment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Variable heavy chain protein of murine anti-human GPR64-18 antibody ID17.
                                                                                                                                                                                                                                                                                                                                               antibody engineering; CD44; leukemia; hematological disease; neoplasm;

The present sequence is that of a preferred heavy chain variable region of a humanised antibody of the present invention. In this sequence, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 10D5 and the framework region originates from human germline VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and thair fragments, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical cerebral amyloid anglopathy, and to inhibit formation or center of the brain. (Updated on 23-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New humanized 10D5 antibody, useful for the manufacture of a medicament for treating Down's syndrome, clinical or pre-clinical Alzheimer's disease or cerebral amyloid angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 34; DB 6; Length 123; 100.0%; Pred. The present sequence is that of a particularly preferred heavy chain variable region of a humanised antibody of the present invention. In this sequence, the complementarity determining regions originate from murine monoclonal antibody 10D5 and the framework region originates from murine germline VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope clocation) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their framents as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical Alzheimer's disease or (pre-)clinical amyloid angiopathy, and to inhibit formation or ceduce Abeta plaque in the brain. The present sequence represents the heavy chain variable region of murine interleukin.4 (IL-4) antibody 3B9. The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rehinitis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA molecules encoding recombinant antibodies useful for treating 1L4-mediated conditions.
                                                                                                                                                                                     Heavy chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin B-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic aesthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
